

FEDERICO ROMERO

FULLSTACK SOFTWARE DEVELOPER

ABOUT ME

I am passionate about continuous learning and being up to date with the latest trends in the IT industry. I am organized, responsible and charismatic. I currently have two years of verifiable experience working for a London company in which I work as a full stack software engineer. Writing clean and scalable code. In the future I would like to continue improving my programming languages and acquire new ones.

EDUCATION

National University of Cordoba

Lic. Kinesiology and Physiotherapy, 2022

I only did 2 years of the degree.

Bootcamp Soy Henry

Full Stack Software Developer, 2022

Arturo Capdevila Superior Normal School

Bachelor of Natural Sciences, 2017

WORK EXPERIENCE

Full Stack Software Engineer

StackZone, 2022 - Present

Responsibility in task management. Merge requests reviewer. Preparation and review of documentation. Implementation of new functionalities and correction of errors in the development of both the frontend and the backend.

Team Leader

Voicecenter SA, 2020 - 2022

Efficiently direct and supervise a team of 14 professionals, ensuring compliance with monthly sales targets.

Organize and chair monthly meetings with the team to analyze and evaluate the progress towards the established objectives. Work closely with my supervisor and managers in defining goals and rewards that drive team performance.

Promote a culture of constant and positive motivation among team members, through actions and daily communication.

Manage and maintain an accurate record of the monthly sales of each vendor, ensuring transparency and efficiency in monitoring results.

PROJECTS

VideoGames Project (HENRY)

Technologies: HTML, CSS, React, Redux, JavaScript, NodeJS, PostgreSQL, Sequelize,

I was part of the entire creation of the project from 0 to its completion. Following the guidelines that the bootcamp gave us. Front end, backend, design and database.

SKILLS

- HTML
- CSS
- Javascript
- Typescript
- React
- Redux
- Redux Saga
- NodeJs
- Express
- Postgresql
- Jest
- AWS
- Angular
- Heroku
- Trello
- Figma
- SCRUM methodologies

Weather-app

- Technologies: HTML, CSS, JavaScript, TypeScript. I took this
- project from one (<https://devchallenges.io>) that was to practice the technologies that I was acquiring in the bootcamp. To continue improving my knowledge. In this case, I was also in charge of doing everything. Both the design and the frontend.

Crypto Coins App

- Technologies: HTML, CSS, TypeScript, Angular.
- This project was part of a technical interview I had for a Chilean company called Better Plan. It consisted of creating an app with the most demanded cryptocurrencies at that time. The design and functionality were their own.

E-Commerce Pro-Clothing (HENRY)

- Technologies: Vite, React, Redux, Styled Components, Vercel, Node, Express, Sequelize, Heroku, PostgreSQL, Mercado Pago, NodeMailer, Firebase, Cloudinary, Trello, Figma, Agile SCRUM Methodology.
- This was the final project for the SoyHenry bootcamp. This time I was in charge of the backend of the platform. I created its own clothing product API to use later in the project. I made the routes of the requests that were needed. I also worked in the frontend and was the leader of the group in which we were 8 people.

Country-App

- Technologies: React, Redux, CSS, HTML, Javascript
- I did this project to continue practicing and improving my skills in the technologies that I was acquiring in the bootcamp. I was in charge of carrying out the entire project, except the design. Since I got the idea from a web page that gives you project ideas to practice the technologies that one knows.
